

## Maintenance Strips

### Typical Material Install:

2" Porous Pave XL

### Typical Base Requirement:

2" Crushed Stone Base

Porous Pave is ideal for use as a perimeter maintenance strip — allows air and water to tree roots while providing a durable, slip resistant surface.

- Reduce maintenance around signs, lamp posts and trees
- Pour-in-place material can fit any shape or size
- Low cost, durable installations provide years of maintenance free service
- Install around building perimeters as a long term solution to higher maintenance coverings like bark, pea stone, etc.
- Eliminates grass trimming
- Works great on buildings without eave troughs, allows water to soak in while eliminating run-off or erosion
